

INDIANA SIGN - ARTWORK REQUIREMENTS

We are very interested in making the best product that we can. Receiving poor quality art will not only increase your cost, but also reduces the quality of the end product.

Vector Based Art

We have CorelDRAW9 (preferred), Illustrator 10 and QuarkXPress 4.1. If your programs are newer, please save files to be compatible with one of these formats.

Please include fonts or convert text to curves.

Pixel Based Art

For many processes pixel based art is acceptable. Formats include .bmp, .tif and .jpg. It is helpful to know which software was used to create the file. Please save your image at "actual size" and at a resolution of 600dpi.

Camera Ready Art

Camera Ready Art is -

- Printed on bright white paper.
- Black and white line art (not grayscale).
- Crisp Clear Lines.

Photographs

Our favorite way to use a photo is to actually have a print. Electronic images from a quality digital camera can be used.

NOTE: Indiana Sign Company uses IBM compatible PCs.
